Lead Technical Writer | User Experience, Network Infrastructure

- Technical writer with extensive experience documenting enterprise infrastructure and network monitoring applications, focused on user interface and experience.
- Lead end-to-end documentation for complex technical products, collaborating with engineering, product management, UX, and customer-facing teams to translate architecture, workflows, and operational guidance into clear, accurate content.
- Skilled advocate for stakeholder goals, promoting stakeholder interests as constituencies of the user doc process.
- Native experience with docs-as-code workflows, topic-based authoring, content strategy, and UX-centric approaches that accelerate product adoption and reduce support overhead.
- Deep experience with supporting engineering teams distributed across geographies and time zones.
- Long practice with Agile development methodologies and tools, including Scrum, Kanban, Jira, Confluence, and similar bespoke tools that facilitate Agile practices to deliver software as a service.

Expertise

- Documentation strategy and information architecture
- End user and administrator documentation
- Network operations and security documentation
- Docs-as-code and single-source authoring
- DITA XML, Markdown, and HTML-based publishing
- MadCap Flare, Oxygen XML, Visual Studio Code
- GitHub and Git version control workflows
- UX advocacy and workflow simplification
- Agile Scrum and cross-functional product development

Principal Technical Writer

Pegasystems, November 2024 to October 2026

- Wrote user documentation for new UX features in the Pega Infinity business process automation platform, describing tools used by application developers to implement UX features in workflow automations and end-user-facing self-service portals.
- Practiced docs-as-code using Oxygen XML and DITA source files managed in GitHub.
- Used AI-assisted research and drafting to accelerate new content development by analyzing Agile artifacts, generating drafts, and validating refined content against the corporate style guide. Used Visual Studio Code as an orchestrator for managing the research and drafting process, generating content in DITA XML.
- Collaborated with tech writers, software developers, and product managers distributed across Waltham, Krakow, and Hyderabad to ensure timely delivery of feature descriptions and other user documentation updates.

Lead Technical Writer

Riverbed Technology, July 2016 to November 2024

- Sole technical writer for Riverbed IQ, a network incident visualization and response automation platform that ingests network event data from Riverbed and third-party monitoring tools to identify incidents and launch remediation workflows.
- Wrote and maintained topic-based, single-sourced application help using Madcap Flare, working in an Agile Scrum environment to describe new features as they were implemented. Managed content source using git and Azure DevOps to manage documentation tasks, PRs, and version-controlled source changes.
- Worked directly with UI developers, product managers, and product owners to document complex monitoring and incident-response workflows, define terminology, and improve the usability of product interfaces.
- Contributed weekly as a member of the UX advisory team that reviewed customer UX issues and defined solutions to customer requests.
- Created short instructional videos using OBS Studio, writing use-case-based scripts and walkthroughs that explained product functionality and operational use.
- Collaborated with engineers and product managers distributed across Cambridge, Austin, San Jose, and Cluj.

Senior Technical Writer

Corero Network Security, August 2012 to July 2016

- Sole technical writer for the SmartWall DDoS mitigation solution, documenting a network appliance and management application used to mitigate denial of service attacks in enterprise and service-provider environments.
- Wrote and maintained topic-based, single-sourced application help using Madcap Flare, collaborating closely with engineers and product managers to describe all configuration, operation, and responsive use of the product for protecting high-value networks from DDos attacks.

Senior Technical Writer

F5 Networks, March 2010 to August 2012

- Member of a documentation team that used Adobe FrameMaker to document a network storage virtualization appliance for enterprise customers.

Technical Publications Contractor

Verivue, Inc., March 2009 to February 2010

- Contributor to a documentation team that used Oxygen XML to document a video-on-demand server management application.

Principal Technical Writer

Reva Systems Corporation, November 2005 to February 2009

- Sole technical writer for a network appliance used to manage RFID installations in manufacturing and retail environments.

Member of the Technical Staff

West Ridge Networks, Inc., June 2004 to July 2005

- Sole technical writer for an enterprise network QoS management application.

Technical Publications Lead

Gotham Networks, Inc., September 2000 to May 2002

- Led a small group documenting a carrier-class edge switch/router.

Senior Technical Writer

Omnia Communications, Inc., January 1999 to September 2000

- Sole technical writer for a carrier-class edge switch/router.

Principal Technical Writer

Bay Networks, Inc., December 1996 to August 1998

- Contributed to documentation for network remote access concentrators.

Senior Technical Writer

Parametric Technology Corporation (PTC), August 1990 to March 1996

- Wrote end-user documentation for Pro/ENGINEER, covering versions 6.0 through 16.0.

Education

University of Massachusetts, Amherst
B.A., English

Worcester Polytechnic Institute
Graduate-level coursework in marketing
